Bobby Newland WIA Project

The reason for me choosing this design is this is a prototype of the site for my partner's and my promotion company. The color scheme is similar to the colors we use in most of our marketing materials.

Criteria:

Homepage:

When you first land on the website you arrive at the homepage.

jQuery Effects:

1) In the main header the "Lets Party" button launches a modal window with the form to get a quote I utilized the show and hide effect methods on click
2) On the contact page there is a Google Map that I utilized the css method to make the image bigger on mouse enter and return to normal size on mouse leave.

Modernizr:

I used Modernizr to check for date picker support utilizing the success and fail JS files.

Interactive Gallery:

On the Gallery page I utilized the lightbox framework to build an interactive photo gallery.

HTML 5 Video:

On the homepage I utilized HTML 5 to add a featured video.

Canvas:

1) On the homepage I used the canvas feature to add a featured image on the website
2) On the contact page I used the canvas feature for the Google Map.

Data Visualization:

Not present (no excuse sorry)
